

SOLRESOL: THE PROJECT V.0.95

DOCUMENTATION

Thank you for downloading SolReSol: The Project (v.0.95).

This file contains the information that is displayed in the program itself, a FAQ section and the vocabulary used in SolReSol: The Project (v.0.95).

SOLRESOL FAQ

1. What is SolReSol?

To give a short answer, it is a constructed (or artificial, i.e. intentionally created) musical language devised almost two centuries ago by François Sudre. SolReSol is a unique language because it uses a multitude of ways of speaking and writing, such as using the seven spectral colors, numbers from 1 to 7, musical notes from Do to Si or from C to B, etc. SolReSol means "Language" in SolReSol. If you want to read more and find out about its history and rules, try [Wikipedia](#) or [SiDoSi](#) (meaning "Learn" in SolReSol - now you already know two important words in SolReSol!)- a great website dedicated entirely to this language.

2. Who actually needs such a language?

First of all, SolReSol is beautiful. It is as beautiful as the bright colors of the rainbow and as the seven notes of the chromatic scale, so many artists use it in their installations, music, video clips, films, paintings, poems, performances and stories. There are also enthusiasts who speak this language and, hopefully, in the future it will gain a bigger following. Second, It is an almost perfectly structured minimalistic and versatile language (despite being called an a priori language, it is heavily influenced by French - this can be seen in both its grammar and vocabulary) with words separated into semantic groups, synonyms and homonyms that overcomplicate the language are almost absent and many antonyms can be formed by just inverting the syllables. SolReSol brings linguists one step closer in their search of the perfect language.

3. Where do I start with SolReSol?

SolReSol is not the most widely used constructed language and certainly not the easiest one to learn. However, it is a very logical and well-structured language, so when you learn the rules, begin to get used to the language and learn the essential words, you will be making a good progress. Learning tools and exercises that are going to be included in the upcoming SolReSol: The Project versions will help you to do that.

4. I am hopeless at music! Will I be able to understand SolReSol?

Remember this: nobody is hopeless at music (or any other skill, for that matter) - it might just take a long time to train your ear. Try Solfege mode game which is included in SolReSol: The Project - understand the connection between position of the note on the staff and the sound, try different instruments to see how their sound changes depending on notes played. Keep trying harder and harder - hundreds, thousands of times - this is what real-life solfege is about. You have reached the pinnacle if you can clearly imagine the sound in your head even before you press the key to play it.

5. SolReSol words in this program are different from SolReSol words in XYZ!

SolReSol was originally written in French with no commentary in another language, so there might be several ways to translate certain words. Moreover, in this version words are monosemantic, i.e. have only meaning/translation. You may download a full list of words used in v.0.95 [here](#). If you want to help the community to get closer to 100% translation fidelity, to revise and improve the vocabulary to make it the way it was meant to be by its creator, please [read this](#).

6. How do I use my synth with SolReSol:The Project?

This feature is still experimental, but it does work if you follow the steps mentioned in the documentation. To begin with, make sure that your MIDI instrument is properly connected to your PC - try testing it with some other programs. When you start Bome's Midi translator, do not forget to choose the right input instrument and load the script named !SOLRESOL (found in the folder where you installed SolReSol: The Project or [here: http://sharyphil.com/root/files/!SOLRESOL.bmtp](http://sharyphil.com/root/files/!SOLRESOL.bmtp) - Right click - Save As...)

7. The program won't start.

If you are missing mspdb120.dll, make sure you download and install [vcredist_x64](#) and [vcredist_x86](#).

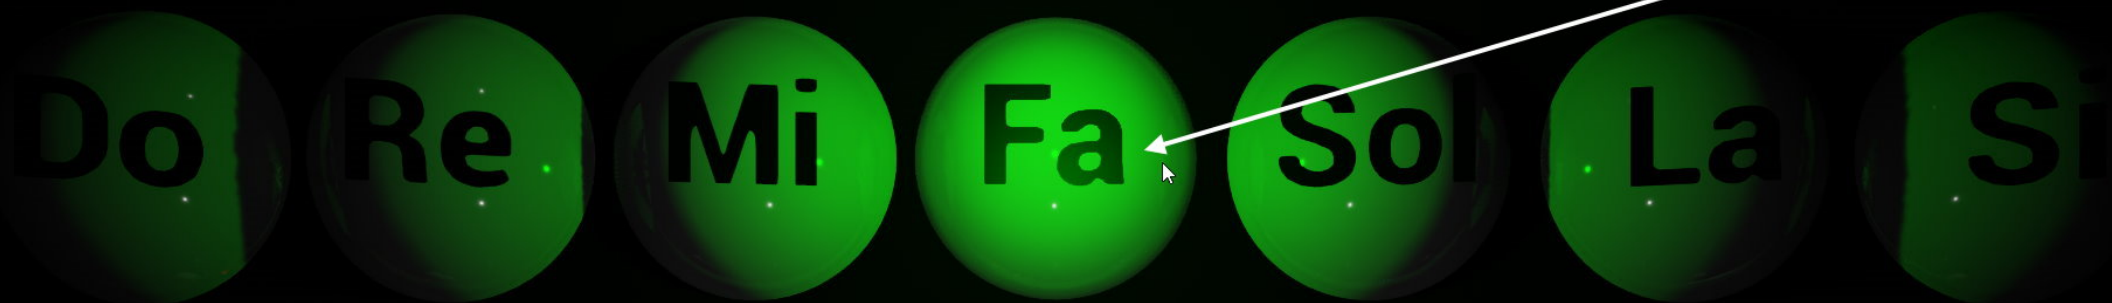

If you are missing X3DAudio1_7.dll, you can download this [Direct X update](#). If these steps do not help, you may have encountered a software/hardware compatibility issue - for example, an unsupported operating system or video adapter. SolReSol: The Project is powered by Unreal Engine 4, which is a modern high-end 3D engine, but it has been launched on a variety of hardware, including older PC models, tablets and laptops with integrated video adapters, so it demonstrates a high degree of compatibility.

Discovery Mode

Discovery Mode is a good way to start if you want to learn more about how SolReSol works. It features four syllable slots which are used to compose words with four vivid lights that show you how the word is formed. Three instruments are available: piano (default), glockenspiel and violin (to honor François Sudre who played this instrument). Here are some things to try to understand SolReSol rules better:

- 1) Compare one-syllable, two-syllable words and longer words:
How does the complexity of their meaning change?
- 2) Input two syllables and try changing just the third one, for example:
What do DoReMi, DoReFa, DoReSol, etc. have in common?
- 3) Discover antonyms, i.e. words with the opposite meaning, such as
FaLa and LaFa, SolSiFa and FaSiSol, etc.

Input letters by clicking on the spheres

Click on these notes to choose which syllable you are changing

SolReSol to English

This mode allows you to input phrases and texts in SolReSol and translate them into English. It is recommended that you start with Discovery Mode to familiarize yourself with how separate SolReSol words are translated in this program and then proceed to translation of whole phrases.

SolReSol to English translation mode features mouse or keyboard input and also allows live input from a MIDI musical instrument. Unlike Discovery Mode where you have to swich syllables manually, this mode features a fast input system - for example, to type SolReSol, which, as you know, means "Language", you can press 5 2 5 and then Space on your keyboard or click on the spheres Sol, then Re, then Sol again, and then the big space button below the spheres to input the word. This way you can quickly input whole sentences and texts.

Realtime MIDI Input

Realtime MIDI Input is a unique feature of SolReSol: The Project and a pioneering attempt to create a digital translator that interprets live music as SolReSol sounds and words. Currently, there is no native MIDI support, so you have to follow these steps:

- 1) Download and install a free program called "Midi translator classic" (from bome.com or sharyphil.com).
- 2) Connect your MIDI synthesizer to the PC.
- 3) Run SolReSol: The Project and enable Realtime MIDI playback.
- 4) Run Midi translator classic, then click "File", then "Open" and open the script named !SOLRESOL (in your SolReSol: The Project folder).
- 5) If everything is configured correctly, you can go back to SolReSol: The Project and input notes from the third, fourth or fifth octave on your synthesiser. Note how the sounds change to Steinway grand piano. If you can't hear the sounds, get some help from Shary Phil.

The seven notes (you can also use keyboard keys 1-7)

Space button (use it or Space to finish inputting the current word)

Music Will Never

The word that you are currently inputting

Translation of SolReSol words you have typed

Resets currently input syllables (alternatively, use Backspace)

Changes the musical instrument (unless Live MIDI Input is on where only Steinway grand piano is available)

Change the speed

Input speed: 1 word per 0.5 second(s)

Current speed of automatic input (if Live MIDI input is on, otherwise press Space to input words)

In this mode you can input English words using your keyboard and translate them into SolReSol. Note that currently the English vocabulary is limited (see sharyphil.com for details and a PDF containing all words from the database), but there are still over 2500 word forms. For the best results, follow these tips:

- 1) Use a lemma (the word form you can find in a dictionary) instead of a particular word form, e.g. "student", not "students"; "go" instead of "going", "their" instead of "theirs".
- 2) If you can't find a word, try inputting its synonym: "fast" instead of "quick", "pain" instead of "ache",
- 3) Try explaining more complex words in simple terms: while there is no word "decade", there are "ten" and "day", the same is true for explaining "tiny" as "very" + "small", "girl" as "young" + "woman".

Solfege Mode

One of the main ways to speak SolReSol is to play notes from Do to Si on a musical instrument. Solfege Mode is a game that helps you to improve your musical ear so that you can understand SolReSol by ear. Believe it or not, it is possible, nobody is hopeless, especially when it comes to relative pitch - the ability to hear which note sounds higher. The game begins in Easy Mode where you can see the note on the musical staff. (the notes begin with the Middle C (Do) and cover the fourth octave). You can always repeat the current note (but lose some points) and change the musical instrument (although piano is recommended for beginners). Each correct guess gives you 100 points, each wrong guess deducts them. Once you score more 1500 points, Expert mode is on and you cannot see the note on the musical staff. Try to score more than 5000 to see the secret message.

Click on the sphere to input your guess

Chaos Mode

Chaos mode is an automated demonstration of SolReSol: The Project. Just start it and watch how notes and colors form random words. The word changes once the notes have been played and the colors have flashed, so you currently see the previous word, not the next one that is being input.

This mode is designed to be distraction-free, exit at any time using Esc. Contemplate the chaos for a couple of minutes, enjoy the colors and sounds and ask yourself these questions:

- 1) Are the words really random or are there some kind of rules that they follow?
- 2) Do they create a particular phrase that catches your attention?
- 3) What happens if you press Up or Down (or scroll your mouse) many times?
